Climbing Hydrangea (Hydrangea petiolaris) at the entrance of the Colony Club, Springfield, Mass.

Plant Aristocrats of New England

1849 · Ninetieth Anniversary · 1939

Office of Adams Nursery, Inc., on Route 20 between Springfield and Westfield

Four Score and Ten . . .

"THREE SCORE AND TEN" is heard frequently, but "four score and ten" is so rare that it at once becomes a mark of distinction. Few men, and fewer industries, reach the honorable age of ninety years; yet that span of time covers the history of Adams Nurseries.

Hardy pioneers, pushing their way westward in the "days of forty-nine," smiled when John W. Adams started a little nursery near Portland, Maine. There the venture was carried on, despite the severe climate, until about 1867. Mr. Adams then brought the business to Springfield, securing a tract of land on North Main Street.

Here the nursery remained until 1912, when a farm of about 40 acres, on the Spring-field-Westfield Highway, was purchased. The main office and salesroom remained in Springfield for ten years longer. In 1896 Mr. Adams' two sons, Walter and Charles, were

taken into the business and have been active in its management since that time.

While history is interesting, and teaches us many lessons, it is the present and future that concerns us most. We believe that buying trees, flowering shrubs, garden plants, or bulbs, should be made as easy as purchasing furniture, a radio, or a new gown. To bring this belief to actuality we have established:

- 1. A location convenient to Springfield and Westfield, and only a short distance from Pittsfield, Greenfield, Holyoke, and other important New England points.
- 2. A Landscape Department, with a staff of trained mcn, who will consult with you about your planning and planting problems. Most of the illustrations in this book show the work of this Department.
- 3. A display garden where visitors may enjoy and study plants and flowers from tulip-time in May to chrysanthemums in late October. The tulips include many of the recent novelties as well as older and popular sorts. Words fail to describe the beauty of the rose-garden—the first blooms open in early June and we have from four to six weeks of color and fragrance. There are some flowers all summer, and usually a second burst of color in September.
- 4. A prompt and efficient delivery service, bringing trees, shrubs, and plants to your home within a few hours after they are taken from the ground.
- 5. An organization that will look after your interests from the first interview, and continue this interest long after the planting is completed.

Our business has been built on these foundation stones, and during all these changing years the purpose of the founder has never been altered. The principles of honest quality, of careful service, and reasonable prices, continue to govern our associations with friends and customers.

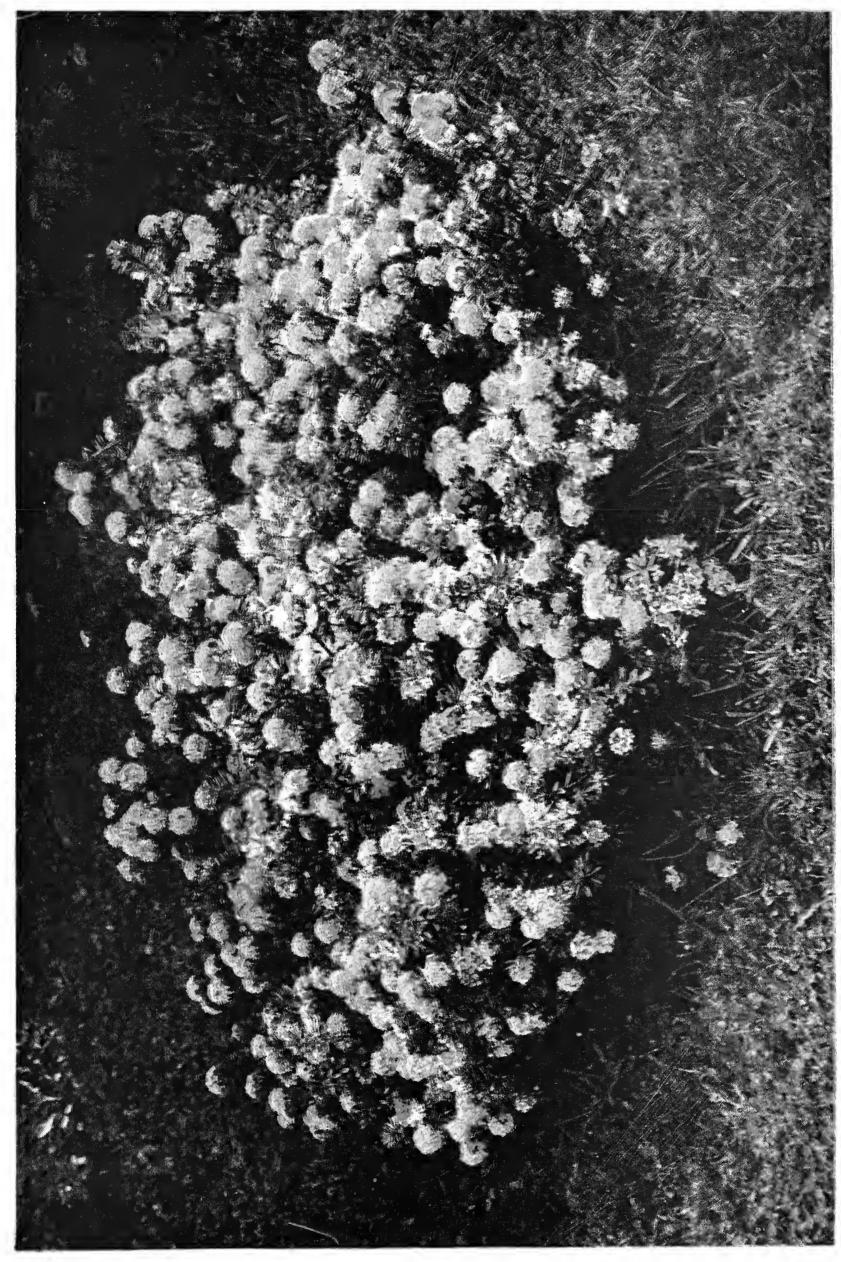

ADAMS NURSERY, Inc.

Plant Aristocrats of New England

In the plant kingdom there are certain plants which possess such outstanding characteristics that one thinks of them reverently as belonging to the nobility.

It might be a beautiful flower or fragrance such as the May-flowering Viburnum, or an exuberance of brilliantly colored fruits such as are possessed by the Flowering Crab-Apple or Mountain-Ash.

This Ninetieth Anniversary Booklet does not mention or list all the varieties we grow. It contains only those that we consider Plant Aristocrats of New England.

Daphne Cneorum or Garland Flower. A dainty little shrub with fragrant pink flowers in spring and later in autumn. (See page 22.)

Buddleia, Charming

New Pink Buddleia, Charming

One of the outstanding new introductions. Beginning in mid-July and continuing into autumn the shrub bears long sprays of lavender-pink blooms. 2 to 3-ft. field-grown plants, \$1 each.

Fragrant Hybrid Lilacs

Most folks do not appreciate the flower-size and range of color found in Hybrid Lilacs. Many shades of red, pink, blue, and purple, in unbelievable large trusses, place them unquestionably in the class of aristocrats. Lilacs are absolutely hardy and vigorous in growth; they prefer a rich, moist soil and a sunny location. An application of lime is beneficial, as they like a sweet soil.

2 to 3 ft., 75 cts. each; 3 to 4 ft., \$1 each

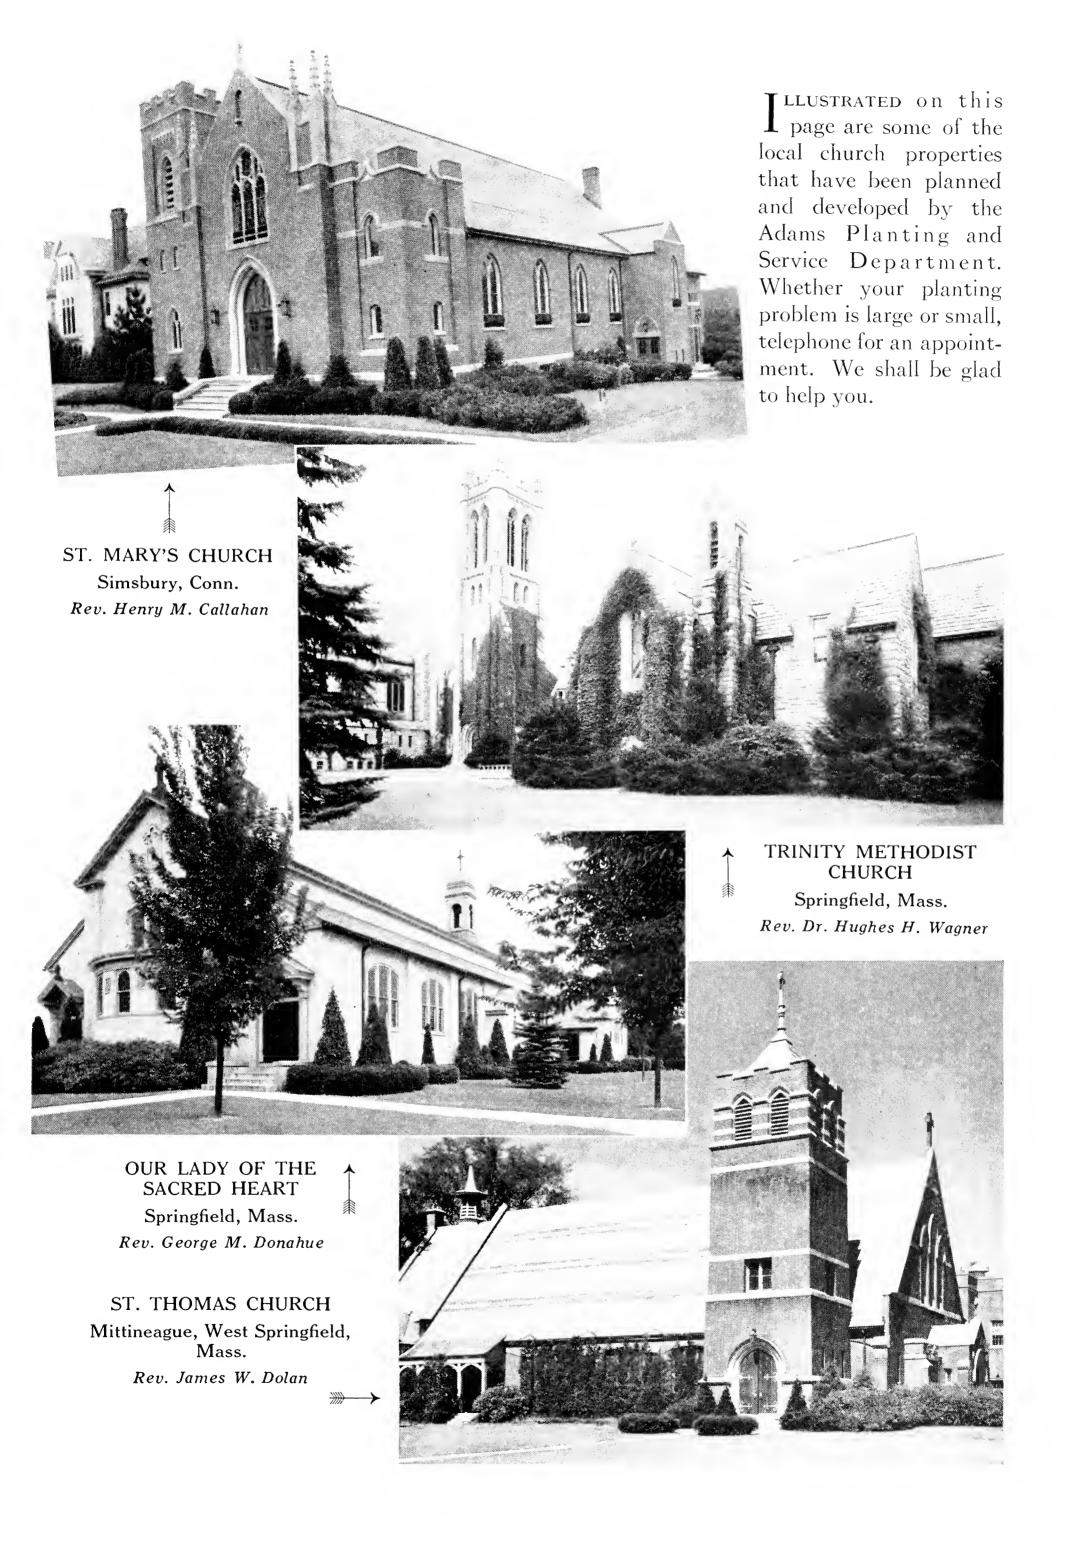

Single Lilacs

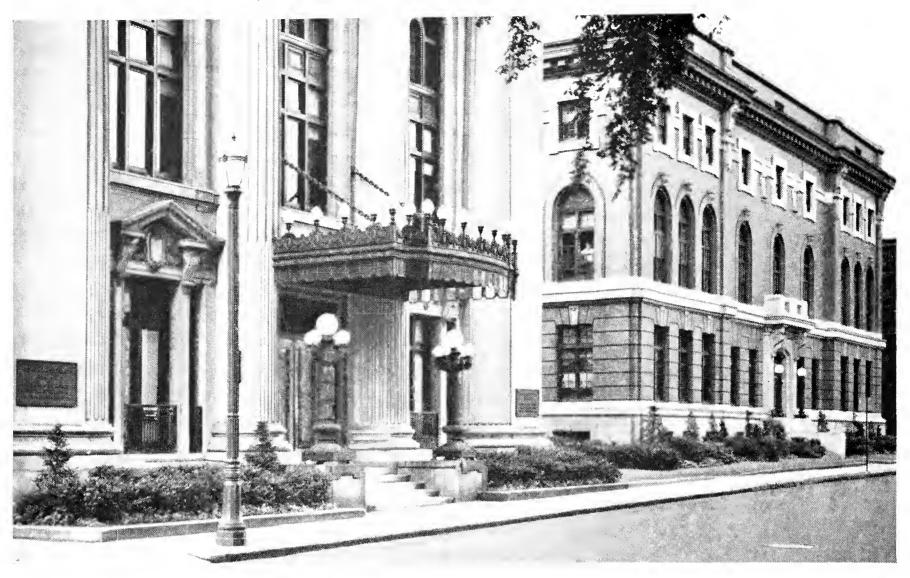

Charles X. Bluish violet-red. Best for cutting.
Comte de Montebella. Light sky-blue. Late blooming.
Congo. Wallflower-red; full trusses. Midseason.
Dr. von Regel. Pale pink, margined white. Compact growth.
Frau Bertha Dammann. White; large clusters.
Lucie Baltet. Coppery old-rose; large.
Marie Legraye. White; clusters medium size.
Mme. F. Morel. Purple buds open to pink blooms. Extra large.
Souv de Ludwig Spaeth. Rich purple-red. Extra free-blooming.

Double Lilacs

Alphonse Lavallee Blue-violet; long truss.
Belle de Nancy. Satiny pink with white center.
Charles Joly. Bright red; slender truss.
Charles Sargent. Violet-blue; compact truss.
Jeanne d'Arc. Buds yellowish; blooms pure white.
Mme. Lemoine. Buds light yellow, opening into pure white blooms.
Michel Buchner. Blue, shaded light rose.
Pres. Fallieres. Lilac-pink; extra-large florets.
Pres. Grevy. Light blue. A valued variety.
Pres. Poincare. Blending of purple, blue and red.
Pres. Viger. White with tints of mauve.

Successful Plantings Under City Conditions

The Foundation Plantings about the offices of the Springfield United Electric Light Company were installed three years ago by the Adams Nursery, Inc. We are proud of this job as it demonstrates that the proper selection of plants will give good results, even under city conditions. Such conditions present many hazards to plant life. Some plants quickly succumb to the dust and gases encountered, while others take no notice. Our experience proved that Japanese Yew, Rhododendron, and Juniper would thrive in this northern exposure under city conditions. Every planting has its problems. Take advantage of our experience. Telephone for an appointment today. Our experienced men will be glad to help you.

New Home of Mrs. Calvin Coolidge.

Planted by Adams Nursery, Inc.

Better Service and Landscape Advice

FOR NINETY YEARS we have rendered a continued service as nurserymen, land-scape advisers, and horticulturists.

When Mrs. Calvin Coolidge recently completed her new home in Northampton, she realized that the same principles which make a building-plan desirable apply also to the planting-plan. Like thousands of others, she had confidence in our ability to create a home atmosphere. She desired that from her home-grounds should emanate a feeling of hospitality and a quality of refinement. She also knew that planting was a sound investment because it would increase the value of her home.

It is our job to build attractive home-grounds. They do not, however, just happen, but are the result of careful and intelligent planning. It is the attractive touch, due to the picturesque arrangement of shrubs, trees, and vines, that convey the impression of homes, and not just mere houses.

Realizing that plants, their names and habits, are confusing to the layman, we have established a Service Department. The Adams organization, with its ninety years of experience, is anxious to make planting a pleasure, and attractive home-grounds easily attainable.

Our Service Department is made up of technically trained men who have had abundant experience and daily association with plants and plant matters. Their knowledge and ability is at the disposal of all our customers, present and prospective.

Our service includes a personal consultation on your home-grounds with these men, whose only desire is to create beauty and a satisfied customer. Telephone our office for an appointment. We shall be pleased to make suggestions and submit estimates without placing you under any obligation.

MOLINE ELM (Ulmus Molini)

The Moline Elm guarding the entrance to this New England home is fully as hardy as the American Elm. The form, however, is quite different—tall, upright, with graceful branches. The leaves are much larger than those of its American cousin, and distinguished by a bluish green tone. Dignified and desirable for both lawn and roadside planting. (See page 18.)

Purple-Leaf Beech

See page 21 for prices

Specimen Lawn Trees

BETULA alba laciniata. Cut-leaf Weeping Birch. A popular tall and slender tree, with drooping branches, delicate foliage, and silvery bark. Each 10

Foundation Plantings

THE foundation planting for the Byron Funeral Home was completed in the fall of 1937, and shows the immediate effect created by a few evergreens. From it originates a feeling of neatness and refinement, blending the architectural lines with the natural surrounding landscape.

Fundamentally, American foundation plantings do more to create that home atmosphere which is so ably expressed in the slogan, "It's not a home until it's planted."

There are many things to be considered when choosing a foundation planting: the architecture of the house, whether the plants will be in a shady or exposed location, and if the soil is adapted to the varieties you wish to use. The ultimate height of the planting should be seriously considered; the mistake is often made of over-crowding and using fast-growing varieties that soon grow too tall, obstructing windows and becoming generally out of proportion to the building.

One would never think of building a home without first seeking the advice of a competent architect. For the same reason the home-owner should consult a landscape architect, or reliable nurseryman, before considering the foundation planting. Let us help you solve this important problem and make your home a pleasanter place in which to live. Telephone us today and make an appointment with one of our experienced plantsmen.

DOGWOOD

White-Flowering

Among all of our native trees none is more distinctly American than the White-flowering Dogwood. Born in America, it has finally conquered the hearts of Americans, and is now being generally recognized as the finest of all flowering trees, possessing the maximum of attractiveness throughout the entire year.

The Dogwood is a small tree, rarely

over 25 feet tall, with spreading branches. In early spring, before the leaves appear, this beautiful tree produces a mass of large, showy white flowers. In September numerous brilliant red berries are produced, and the shiny dark green leaves turn to vivid reds and scarlet. It thrives in any ordinary soil and stands shade or full sun equally well. Its cosmopolitan characteristics permit its use in many locations.

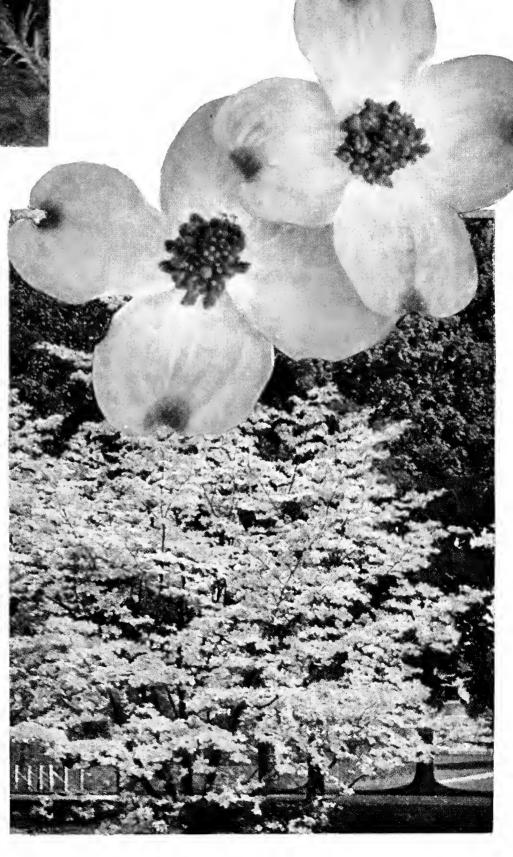

Prices of White-flowering Dogwood:

6-8 ft	. 4.00	35.00	325.00
8-10 ft	5.50	50.00	

Pink-Flowering

This was discovered within the city limits of Philadelphia about 55 years ago by the late Thomas F. Meehan, an internationally known horticulturist. He found one pink-flowering branch growing out of a white-flowering tree. He decided to perpetuate this in his own expert way by grafting on seedlings of the white variety. From that beginning came all the Pink-flowering Dogwoods seen in this country. It is similar in all respects to the white variety, except that the flowers are a beautiful shade of pink. Makes a fine specimen and looks well when interplanted with the white variety.

NATIVE RHODODENDRON

These handsome, broad-leaved evergreens are found growing naturally in the mountain ranges from the Carolinas north to Maine. Rhododendron maximum, R. catawbiense, and R. carolinianum are reliably hardy in New England. They can be grown to perfection if given the proper location and soil conditions. Any welldrained, moist, eool soil, which does not eontain lime or heavy clay, will prove satisfactory. Connecticut Valley soil is naturally acid and adapted to Rhododendrons, but it is well to prepare the bed with plenty of leaf-mold and humus. They do best when planted in beds sheltered against drying winds and burning sun. Water well and muleh winter and summer with a 12-ineh layer of leaves.

Our nursery includes several acres of these plants growing under ideal conditions. We shall be proud and pleased to show them to you.

Rhododendron carolinianum. Carolina Rhododendron. Small, narrow leaves, dark green above and covered with brownish dots beneath. Clusters of clear rose-pink flowers appear in May, before the new shoots start their growth.

Born in America, but a true aristocrat. Laurel grows naturally in the northeastern United States and has been adopted as the State Flower of Pennsylvania and Connecticut. The shrub is popular, perfectly hardy, and next to rhododendron is our most beautiful flowering evergreen. Its green foliage and shell-pink flowers need no description. The plants require the same general soil-conditions and treatment given rhododendrons, but are not quite so particular.

You will find thousands of bushy, shapely plants in our nursery, ready to bring their beauty to your grounds.

HYBRID RHODODENDRON

In the plant kingdom they are members of the royalty. Their regal flowers, in varying shades of red, pink, and lavender, give a wider range of color than is possible with the native Rhododendron. They require the same culture and soil-conditions as the natives and in addition a little more protection from occasional severe winters.

Selected plants, $1\frac{1}{2}$ to 2 ft., \$4.50 each

Boule de Neige. Pure white. Plants dwarf. F. D. Godman. Bright crimson, with darker

Ignatius Sargent. Light scarlet, with rosc tint. Kettledrum. One of the best reds. Roseum elegans. Rose-pink. A choice variety.

HYBRID RHODODENDRON SEEDLINGS

 $1\frac{1}{2}$ to 2 ft., \$3.50 each, \$33 for 10 2 to $2\frac{1}{2}$ ft., \$4.50 each, \$42 for 10

FLOWERING CRAB-APPLES

In New England they are to be desired more than the Japanese cherry because they excel in abundance of flower and fruit and, above all, are dependably hardy. There are several fine varieties with pink or white flowers and red or yellow fruits. They lend themselves readily to mass or screen plantings, groups or single specimens.

Sargent's Flowering Crab (Malus Sargenti). Clear white flowers in early May, followed by dark red fruits. Tree low growing. Hardy. 3 to 4 ft. \$1.25 each, \$11.50 for 10.

Japanese Flowering Crab (M. floribunda). In early May has a multitude of pink buds and white or pinkish flowers. Birds enjoy the yellow fruit.

Arnold's Flowering Crab (M. Arnoldiana). Flowers pale rose. Fruits yellow, quite large.

Carmine-flowering Crab. Flowers rich carmine. Fruits deep red.

Red-vein Flowering Crab. Deep pink blooms and dark red fruits.

Eley Flowering Crab. Flowers dark pink. Fruits red.

Scheidecker Flowering Crab (M. Scheideckeri). Flowers double, bright pink, in mid-May.

Price on above varieties:

Each 10 4-5 ft. \$1.25 \$10.00 5-6 ft. 1.40 12.50 6-7 ft. 1.75 16.50 7-8 ft. 2.50 22.50

We cordially invite you to bring your friends and visit our Display Gardens. You may go where you please and stay as long as you like. You will not be approached unless you desire information or service.

Goldflame Honeysuckle (Trade Mark)

Goldflame Honeysuckle

This superb, new, hardy, everblooming Honeysuckle has reached the front rank. Its large flame-coral trumpets, lined with gold, appear in immense showy clusters from May until frost. The dark blue-green foliage is attractive in itself and makes a perfect background for the brilliance of the flowers. 2-yr. plants, 90 cts. each, \$8 for 10.

DAYLILIES Join the Aristocrats

In the hands of hybridizers the Daylily has emerged with much larger flowers, a wider range of color, and a much longer period of bloom. They are unsurpassed in permanence, hardiness, and ease of culture, and produce unusually large orange or yellow blooms. A careful selection of varieties will give you bloom from May to September.

Aurantiaca. 2 ft. Orange-yellow. June. Flava. 2½ ft. Clear yellow. June. Sovereign. 2 ft. Yellow. June.

Above three varieties, 25 cts. each, \$2.50 per doz.

Golden Bell. Apricot-orange. June, July. Sir Michael Foster. Apricot-yellow. June, July.

Above two varieties, 50 cts. each, \$5 per doz.

Ophir. Golden yellow. July, August. Hyperion. Canary-yellow. July, August.

Above two varieties, 75 cts. each, \$7.50 per doz.

Dr. A. B. Stout's New Hybrids

Cinnabar. Yellow, flushed red. July, August. Mikado. Rich orange. June, July. Soudan. Clear yellow. July.

Wau-Bun. Twisted yellow petals. June, July.

Above four varieties, \$1 each, \$10 per doz.

HONEYSUCKLE VINES... CLIMB IN POPULARITY

Whether rambling over a stone wall, covering an unsightly bank, or shading the front porch, Honey-suckles will give you a wealth of color and an abundance of fragrance.

Everblooming Scarlet Trumpet Honeysuckle

A fine new Honeysuckle with large, coral-colored blooms and attractive blue-gray-green foliage. The brilliant, cheerful flowers are produced from May until September. 2-yr. plants, 60 cts. each, \$5 for 10.

Giant Golden Honeysuckle

A new, strong-growing, hardy climber with large, pale green leaves and long, giant, tubular flowers of an intensely rich golden yellow, tipped with bronzy red. Blooms in June. 2-yr. plants, 75 cts. each, \$6.50 for 10.

Japanese Honeysuckle

An excellent climber with smooth, glossy, dark green foliage and large, fragrant white flowers, turning yellow. A most constant bloomer. Very desirable for roadside and bank plantings. 2-yr. plants, 35 cts. each, \$3 for 10, \$25 per 100.

Scarlet Trumpet Honeysuckle

High-climbing vine with neat dark green foliage and orange-scarlet, tubular-shaped flowers in terminal clusters from May to September. Endures semi-shade. 2-yr. plants, 40 cts. each, \$3.50 for 10.

Hemerocallis Mikado (Top) Hyperion (Bottom)

Outdoor Living-Room

Many of us have an "Aere of Diamonds" right in our own back yard. A little cleaning up, a few shrubs to sereen the garage, a tree or two for shade, and we have added a very delightful "Outdoor Living-Room" at little expense. It can be enjoyed by the entire family. Border plantings make it a safe play-yard for the ehildren. Its seelusion provides an ideal spot for Mother's afternoon tea or bridge. With an outdoor fireplace and comfortable garden furniture the family pienic can be enjoyed often.

Flowers and roses may be planted to make it the most charming and popular room in the house—an

"Outdoor Living-Room" where the entire family may relax and enjoy nature at its best. Let us help you arrange your "Outdoor Living-Room." We will be glad to meet you at your home to make suggestions. Phone or write for an appointment.

Massachusetts Mutual Life Insurance Co., Springfield Landscaping designed by Olmsted Bros.

A typical plant of Euonymus

Cercidiphyllum japonicum Kadsura Tree

A beautiful tree despite the long botanical name. The form is pyramidal, with upright, parallel branches heavily eovered with foliage. The leaves have a purplish tone when unfolding, becoming light green, and turning in autumn to tones of yellow and searlet. It grows rapidly in moist, fertile soil.

Lac	11 10
4-5 ft\$1.75	5 \$16.75
5-6 ft	0 - 24.00
6-8 ft 3.00	0 - 29.00

Euonymus alatus compactus

In the early fall this Euonymus undoubtedly has more brilliant autumn foliage than any other shrub. The eolor is bright searlet that lasts for several weeks. It is a semi-dwarf, slow-growing variety, indifferent to soil, shade, or city conditions. Perfectly hardy and, as the illustration shows, it develops into a compact, symmetrical specimen.

There are many varieties of Euonymus, varying from merc shrubs to trees 30 feet or more tall. The variety here described is most

satisfactory in New England.

Possibly it performs best as a hedge, where its bushy characteristies produce a perfect barrier and, in the fall, a vivid display of autumn splendor. Each 10

The Christmas Rose challenges the cold of New England winters

Helleborus Niger · Christmas Rose

A most interesting hardy perennial that blooms in midwinter. During mild weather one may see numerous large, white flowers pushing through the snow. It is well adapted to rockeries and does best in a rich loam mixed with coarse sand. A moist, well-drained, partially shaded situation is prefer-

Salisburia (Ginkgo) adiantifolia

Salisburia adiantifolia Ginkgo Tree

One of our most interesting trees because of its ancient history. It was discovered in Japan in 1690, and was supposed to be a native of that island. The Japanese, however, elaimed that it eame from China at a very remote period. Probably it was first introduced into Holland around 1730, and from that country small trees were sent to England and then to America.

In this country it is commonly called the "Maidenhair Tree," and is desirable for street and lawn planting. The form is slender, upright, often 75 feet high; leaves fan-shaped, in clusters of 3 to 5. Seldom is the Ginkgo injured by insects or diseases. It has been used freely in Washington for street planting, making pieturesque avenues.

Hurricane havoc in residential streets of Springfield

Trees for Shade and Shelter . . .

WHAT a heritage in Shade Trees our New England forefathers left us. Strange to say, it required a calamity to make us sufficiently tree conscious to appreciate our loss.

Perhaps the worst feature of the 1938 hurricane was the uprooting and destruction of hundreds of thousands of shade and woodland trees. Buildings can be quickly repaired but it will require a century to replace the lost trees.

The New England Council, realizing the seriousness of the situation, has requested the governor of each New England State to issue, next spring, a proclamation recommending that their people observe an Arbor Week. A systematic tree-planting campaign by individuals and communities will be necessary to restore our traditional New England villages and cool, shady highways.

We believe we have the largest and finest supply of straight, shapely shade trees in New England. We invite you to inspect and select your shade-tree requirements at the Adams Nursery, Inc.

Plant a tree this spring. It will increase the value of your home and make it a more enjoyable place to live in.

ACER · Maple

The Maples are among our most ornamental and desirable trees for specimens and street planting. They are hardy, healthy, and produce cool shade in summer and brilliant fall colors.

The Adams Rose-Garden . . .

We invite you to come and enjoy it during June and the summer months

Here we grow and maintain over one hundred varieties of Roses. During the month of June a splendid opportunity is offered our friends and customers to observe and select their favorites.

In addition, we have a supply of these same varieties in paper pots. These have been grown outdoors and after May 20 are in full foliage and bud ready for you to take home and plant directly into your own garden. They have a large firm ball of earth in which the roots are firmly established.

We have for many years recommended planting dormant Roses in early spring, up to about April 20. After that date we advise placing your order for our potted Roses. Delivery will be made about May 20, when they are thoroughly established.

POTTED ROSES

The illustration to the right gives you a good idea of the quality and condition in which you will receive our Potted Roses. Just remove the paper pot by slitting down the side; plant so that the top of the earth is 4 to 6 inches below the surface, and water well. Our Potted Roses will not stop even to catch their breath before they will supply you with an abundance of bloom.

80 cts. each, \$9 per doz.

Our Landscape Department staff will be glad to discuss your planning and planting problems. Make an appointment at our office or at your home, as may be most convenient to you.

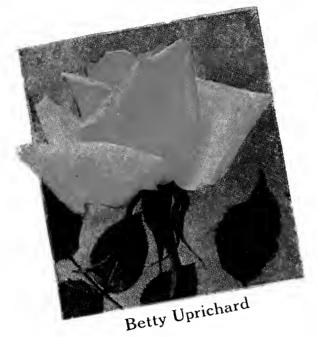

TRI-OGEN

To help our customers grow healthy Roses we strongly recommend the use of Tri-ogen. We have used it in our Rose-Gardens for two years. If applied once a week at double strength in June, and thereafter at regular concentration, it will easily control mildew, black-spot, and aphis. It is economical and saves time and labor. Spreads evenly and adheres to the foliage without showing conspicuously. Complete directions are on the container.

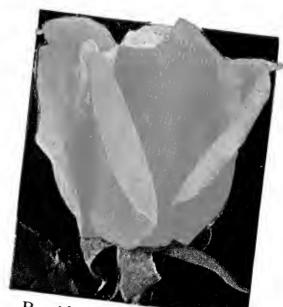

Small Kit (enough to protect 12 to 20 roses for the season) \$1.50.

Medium Kit (enough to protect 50 to 80 roses for the season) \$4.00.

Mrs. Pierre S. du Pont

President Herbert Hoover

ADAMS' ROSES

Adams' Colonial Rose Collection

One plant each of the 6 varieties pictured on this page. They will be in full leaf and bud ready to plant in your garden about May 15.

Adams' Potted Roses for New England

Guaranteed to Bloom

Many years of experience with Roses convince us that Potted Roses are best, and most economical for New England. If you prefer dormant Roses we have them in bareroot plants during April.

The Adams Tulip Display Garden . . .

WE INVITE you to visit our nursery about May 15 when there will be several thousand Tulips in bloom. This is the ideal time to select your favorites and place your order for bulbs. Your order will be delivered in October, which is the proper time to plant bulbs and many shrubs.

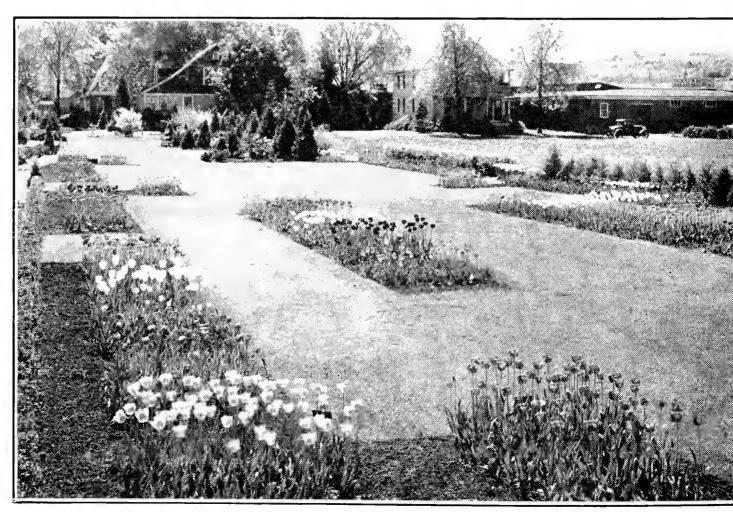

Adams bulbs are imported direct from Holland, the largest and best available. Ask for a price-list which will be published on May 15.

TULIPS

Should be a feature of every garden. Nothing will produce as early, as colorful, and as dependable a display. Nothing will take their place next spring, if they are not planted this fall.

From a photograph taken in 1938, of the Adams Tulip Garden. To appreciate its beauty, visit us in Tulip-time
